

Argo™ Series

A powerful combination for tri-amplified, full-range sound.

The new ELAC Argo Series answers every minimalist audiophile's dream of having a no-compromise powered speaker driven by best-in-class amplifiers that are truly deserving of the name "high end." While most powered speakers rely on Class D digital designs, ELAC engineers build in 250 watts of pure analog amplification for exceptional power and sound. Add the Discovery Connect wireless transmitter to your system, and Argo becomes a wireless speaker that lets you enjoy streaming content without a cable in sight.

Argo F51 Powered Floorstanding Speaker with Wireless

Sonic excellence with ELAC's state-of-the-art drivers.

Designed from the ground up, the Argo Floorstander features ELAC concentric-driver technology to deliver unsurpassed mid- and high-frequency performance, coupled with a trio of custom aluminum woofers for truly impressive bass, all in one elegant package. Tweeter, midrange and woofers are powered by their own dedicated analog amplifier, with a selection of RCA or XLR balanced inputs.

Argo F51 Powered Floorstander

ARGO F51 POWERED LOUDSPEAKER FEATURES

Custom-Designed Midrange/Tweeter

One reason the Argo sounds so natural is because of its in-house developed transducer, a 4-inch aluminum midrange driver with a concentrically mounted 1-inch soft-dome tweeter. Combined, this signature configuration lets Argo set the performance standard for its class.

Custom-Designed Woofers

Argo's woofers reproduce bass with authority, thanks to the special design of the drivers. Developed in-house, the 5¼-inch aluminum cone is the ideal structural material, specified for its ability to deliver slam, punch and accurate low-frequency fundamentals.

Beautiful Cabinets

Argo's elegant design integrates perfectly with any interior. Its enclosure has a fine-furniture finish, available in Gloss Black, Gloss White and Wood Veneer.

Powerful Trifecta

Inside each Argo Floorstanding Loudspeaker is a Tri-Amp Pure Analog Amplifier, employing three separate amps: a 150-watt BASH AB amplifier for the woofers, a 70-watt BASH AB amplifier for the midrange, and a 30-watt Class AB amplifier for the tweeter. A total amplifier power of 250 watts ensures that transducers are optimally—and amply—powered, eliminating clipping and crossover distortion, and driving each transducer with authority. Specs like a 110 dBA signal-to-noise ratio and 100 uV noise floor could only come from such audiophile-quality amps!

Flexible Connections

Local inputs include balanced XLR, TSR, RCA and Wireless, when used with ELAC's Discovery Connect wireless transmitter to stream Discovery, Spotify Connect, Bluetooth, AirPlay and Roon. Just switch Wireless "Off" for a no-compromise analog input and output.
